DETAILED ACTION

The latest advisory action is withdrawn, and a non-final action follows.

Claim Objections

Claims 27 and 29 are objected to because of the following informalities: the phrase "so thick" is a term of degree that is not defined in the specification or claims. Claim 29 is necessarily included due to its dependency. Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 27 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Graff (U.S. Patent 1,721,903) in view of Warrick (U.S. Patent 1,457,565).

Regarding claim 27, Graff discloses at least one vehicle light housing (reference number 1) configured to be arranged on an inner side of a continuous car body (Fig. 2), wherein the car body part has perforation openings (Fig. 2, portion around lens) filled in with light transmissive material (reference number 5) in an area behind which the at least one vehicle light housing is arranged (Fig. 2), at least one illumination element arranged in the at least one vehicle light housing (Fig. 2), wherein light emitted by the at

least one illumination element passes through the perforation openings when the at least one illumination element is switched on (Fig. 2). Graf does not disclose a coating.

Warrick discloses the perforation openings being coated (Fig. 1) with a coating so thick that the perforation openings cannot be detected from the exterior but allow the passage of light (page 1, lines 60-76).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the coating of Warrick in the apparatus of Graff for aesthetical reasons.

Concerning claim 29, Graff and Warrick do not specifically disclose the color matching the car body part. It would have been obvious to one of ordinary skill in the art to match the color of the coating with the car body part, because metallic coatings are used in vehicle body paints for aesthetical purposes, and changes for aesthetics involve only routine skill in the art. See M.P.E.P. 2144.04.

Allowable Subject Matter

5. Claims 1-26 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter.

1) Regarding claims 1 and 26, Warrick discloses the coating thick enough to hide the lens but transmits light, while Foti discloses the paint on the outside of the apparatus and Dranginis (U.S. Patent 4,480,291) discloses the other elements. However, no motivation exists to combine Foti and Warrick, because the apparatus would be rendered unusable for its intended purpose.

Response to Arguments

7. Applicant's arguments with respect to claims 27 and 29 have been considered but are moot in view of the new ground(s) of rejection.
